

I would like to comment on the arrl petition rm-10867. I think the future of amateur radio is what's important. I think 1087 is the best for amateur radio while c.w is a part of it and a part of its history. it should not be a requirement but a choice. While data, packet, phone, and other emissions are a part of amateur radio so is c.w and they are not a requirement. We need to do what's best for the future of amateur radio. we in this country need to keep up with the times or we will fall behind quickly. Other countries in the world have already started to move forward with the dropping of c.w as requirement. i've been licensed for a short while now and i really love and enjoy amateur radio very much. and want to continue to enjoy it. rm-10867 will give amateur radio a future while still preserving its past. THANKS DONALD.
